PROJECT DESCRIPTION

Architecture and design firm ADD Inc, now with Stantec, continues to grow their workplace practice with the design of the new Brickell Link executive office center and co-working facility located at the 600 Brickell Avenue building in Miami, Florida.

Encompassing the entire 16th floor of the building, the 24,000 square foot space is surrounded by floor-to-ceiling windows. All offices have glass walls to take advantage of Miami's city and bay views and to create a sense of transparency. Different professional spaces were implemented such as executive suites, conference rooms, collaborative workstations and lounges to accommodate startups, entrepreneurs or the individual office of a national or multinational company.

"Brickell Link wanted a stylish space to attract executives looking for a sophisticated yet convenient office environment where they can have a private office or an open workstation if they want to collaborate with other professionals," said designer Eric Holland, Principal of ADD Inc and head of the firm's workplace practice in Miami. "We created a comfortable, yet ultra modern look with all the high tech and office amenities that today's professionals would need."

The design takes into account the corporate brand of 600 Brickell by utilizing walnut woods throughout the space. The dark tones are freshened up with tropical color accents of greens, blues and oranges on walls, glass doors, carpets and furniture, giving the space a young and vibrant feel. Concrete floors and exposed 12-inch ceilings complement the contemporary look.

From the minute clients walk into Brickell Link, they get a sense of the design-driven space. In keeping up with the building's corporate brand, the reception area features walnut wood strips that travel up the wall and curve across the ceiling and over the reception desk. Two playful circular benches with green cushions were built into the wall. The five silver pendant light fixtures by famed furniture designer Tom Dixon create a dramatic entrance to the space.

Brickell Link was designed to support green efforts.

The 600 Brickell building is a class-A office tower and one of only 14 in the world to be officially certified as LEED Platinum, the highest certification available from the U.S. Green Building Council. The rating signifies a superior indoor environment of air quality, light harvesting, and energy savings.

About ADD Inc, now with Stantec

ADD Inc, an award-winning architecture, interior design, planning and branding firm with offices in Boston and Miami, has joined Stantec's Buildings Group, a team of more than 2,500 design and allied professionals working in over 90 offices across North America. This evolution of ADD Inc gives our talented designers access to Stantec's world-class resources and multi-disciplinary expertise, which will enhance the design creativity and capability we bring to projects and position our team to work in locations worldwide. ADD Inc's strong reputation for design excellence and our deep expertise in multi-family housing, workplace interiors, commercial/mixed-use buildings, college and university projects, hospitality and branding enhance Stantec's existing capabilities in the Northeast and Gulf Coast. Through this partnership, we can go anywhere to support our clients' dynamic needs in even more creative, collaborative, and personalized ways. www.addinc.com

About Stantec

We're active members of the communities we serve. That's why at [Stantec](http://www.stantec.com)

, we always design with community in mind. The Stantec community unites more than 14,000 employees working in over 230 locations. Our work—professional consulting in planning, engineering, architecture, interior design, landscape architecture, surveying, environmental sciences, project management, and project economics—begins at the intersection of community, creativity, and client relationships. With a long-term commitment to the people and places we serve, Stantec has the unique ability to connect to projects on a personal level and advance the quality of life in communities across the globe. www.stantec.com
